

## Do you love technology and ski? If yes...

---

### **We are looking for a System Administrator**

Paradocs Mountain Software is a young and dynamic company. We are passionate about technology and the ski industry. Our customers are energetic and fun and work closely with the Paradocs team to develop high quality solutions to support their industry. We are looking for a creative individual who will thrive under our fast-paced and exciting working environment.

MUST be willing to relocate

MUST have permission to work in Canada

MUST have ski/snow experience

MUST be bilingual French and English

### **About the work:**

The System Administrator will be a highly proactive and motivated individual capable of taking over all aspects of the configuration and maintenance of our computer systems. More specifically, you'll be responsible for the following tasks and many more that might come your way:

- Setup and maintain the IT infrastructure of a software development company: git, build servers, youtrack, confluence, fileserver, proxmox VMs, LDAP, DNS, etc.
- Monitor and maintain our ski-resort-webstore-as-a-service infrastructure on remote servers
- Provide technical support for both hardware and software issues to our staff and customers
- Install and manage the configuration and operation of the Paradocs software at resorts
- Monitor the IT infrastructure daily and respond immediately to security or usability concerns
- Maintain and monitor the automatic software update system of our software
- Create and verify backups of data
- Other IT infrastructure activities, including servers maintenance, router and firewall configuration, internal databases, malware protection and other configuration processes
- Configure and test computer hardware equipment

### **About you:**

Do you love tackling problems head-on? Do you enjoy coming up with creative solutions for a small and innovative company? Are you constantly updating your knowledge of hardware and software trends and advancements? Do you also love to ski or ride? If you can answer "yes" to those questions, you'll be a great fit in our company.

### **Minimum Qualifications:**

- College degree in IT
- Linux sysadmin background
- Excellent communication skills (verbal and written), in both French and English
- Experience in the ski industry

### **Desired Qualifications:**

- Bachelor degree in Computer Science, Computer/Software Engineering, or equivalent
- 2 years of experience in IT

- Experience with modern software development tools and build environments

**Why join us?**

- Casual and flexible work environment.
- Work and Live at the base of a ski resort, no traffic, all fresh air.
- Opportunity to work in the ski industry. Powder days are not full working days.
- We offer an environment where you can have fun and truly be part of a fast moving team.
